ATM User-Network Interface (UNI)
Specification Version 4.1

af-arch-0193.000
November 2002
© 2002 by The ATM Forum. The ATM Forum hereby grants its members the limited right to reproduce in whole, but not in part, this specification for its members internal use only and not for further distribution. This right shall not be, and is not, transferable. All other rights reserved. Except as expressly stated in this notice, no part of this document may be reproduced or transmitted in any form or by any means, or stored in any information storage and retrieval system, without the prior written permission of The ATM Forum.

The information in this publication is believed to be accurate as of its publication date. Such information is subject to change without notice and The ATM Forum is not responsible for any errors. The ATM Forum does not assume any responsibility to update or correct any information in this publication. Notwithstanding anything to the contrary, neither The ATM Forum nor the publisher make any representation or warranty, expressed or implied, concerning the completeness, accuracy, or applicability of any information contained in this publication. No liability of any kind shall be assumed by The ATM Forum or the publisher as a result of reliance upon any information contained in this publication.

The receipt or any use of this document or its contents does not in any way create by implication or otherwise:

- Any express or implied license or right to or under any ATM Forum member company's patent, copyright, trademark or trade secret rights which are or may be associated with the ideas, techniques, concepts or expressions contained herein; nor

- Any warranty or representation that any ATM Forum member companies will announce any product(s) and/or service(s) related thereto, or if such announcements are made, that such announced product(s) and/or service(s) embody any or all of the ideas, technologies, or concepts contained herein; nor

- Any form of relationship between any ATM Forum member companies and the recipient or user of this document.

Implementation or use of specific ATM standards or recommendations and ATM Forum specifications will be voluntary, and no company shall agree or be obliged to implement them by virtue of participation in The ATM Forum.

The ATM Forum is a non-profit international organisation accelerating industry cooperation on ATM technology. The ATM Forum does not, expressly or otherwise, endorse or promote any specific products or services.

NOTE: The user's attention is called to the possibility that implementation of the ATM interoperability specification contained herein may require use of an invention covered by patent rights held by ATM Forum Member companies or others. By publication of this ATM interoperability specification, no position is taken by The ATM Forum with respect to validity of any patent claims or of any patent rights related thereto or the ability to obtain the license to use such rights. ATM Forum Member companies agree to grant licenses under the relevant patents they own on reasonable and non discriminatory terms and conditions to applicants desiring to obtain such a license. 4 APPENDICES ...................................................................................................................................... 7
1 Scope

The User-Network Interface Version 4.1 specification (UNI 4.1) is an umbrella specification. The intent is to remove any confusion around what the ATM Forum means when a User-Network Interface is defined using the latest versions of various specifications.

The UNI 4.1 is defined by the collection of specifications and standards listed in this document.

2 Capabilities at the UNI 4.1

This specification indicates that other specifications and standards are “applicable” at the UNI 4.1. The capabilities described in those specifications and standards are included as MANDATORY or OPTIONAL as those specifications and standards define them to be.

Table 2-1 shows the capabilities available within the ATM Forum UNI 4.1 Specification. Capabilities are listed as applicable to a terminal equipment and a network node (switching system) and are categorized as mandatory (M) or optional (O).

Implementations claiming conformance to the UNI Specification Version 4.1, shall support the capabilities listed as Mandatory in table 2-1; i.e. by implementing the procedures of the applicable specification as referenced in Section 3.

Note 1 - At least one of the physical layers specified in the applicable specifications of Section 3.1 shall apply.

Note 2 - See Section 3.2.2 for further details on which sub-features are considered mandatory or optional.

Note 3 - See the applicable specification(s) for further details on which sub-features are considered mandatory or optional.

3 Specifications and Standards Applicable at the UNI 4.1

The ATM Forum Technical Committee continues to develop new specifications and maintain existing ones. The specifications listed below are current as of publication of this specification. The reader is directed to the ATM Forum’s web site (see [http://www.atmforum.com/pages/aboutatmtech/approved.html](http://www.atmforum.com/pages/aboutatmtech/approved.html)) for these specifications, as
well as any published subsequent to this specification. The specifications for other bodies (e.g., the ITU-T, DSL Forum) may be found on their web sites.

The following sections list the specifications and standards that apply at a UNI 4.1.

### 3.1 Physical Layer

Any ATM Forum physical layer current specification on the Approved Specifications page is appropriate for use at the UNI. At the time of publication of this specification, the following ATM Forum physical layer specifications are in force.

- af-phy-0015.000, “ATM Physical Medium Dependent Interface Specification for 155 Mb/s over Twisted Pair Cable”, September 1994
- af-phy-0034.000, “E3 Public UNI”, August 1995
- af-phy-0040.000, “Physical Interface Specification for 25.6 Mb/s over Twisted Pair Cable”, November 1995
- af-phy-0053.000, “Addendum to ATM Physical Medium Dependent Interface Specification for 155 Mb/s Over Twisted Pair Cable”, January 1996
- af-phy-0128.000, “622 and 2488 Mbit/s Cell-Based Physical Layer”, July 1999
- af-phy-0130.000, “ATM on Fractional E1/T1”, October 1999
- af-phy-0133.000, “2.4 Gbps Physical Layer Specification”, October 1999
- af-fbatm-0139.001, “Frame-based ATM Transport of Ethernet (FATE)”, July 2002
- af-fbatm-0151.000, “Frame-based ATM over Sonet/SDH (FAST)”, July 2000
- af-phy-0170.000, “PHY Specification for the 45Mbps and 155Mbps Rates”, May 2001

In addition to these, the following specifications and standards MAY be used:

---

1 The ATM Forum Approved Specifications web page contains information about updates to this specification.
- ITU-T Recommendation G991.2 Amendment 1, November 2001
- ITU-T Recommendation G.992.1, “Asymmetrical digital subscriber line (ADSL) transceivers”, July 1999, including the changes and corrections specified in:
  - ITU-T Recommendation G992.1 Annex H, October 2000
  - ITU-T Recommendation G.992.1 Corrigendum 1, November 2001
- ITU-T Recommendation I.432.1, "B-ISDN user-network interface - Physical layer specification : General characteristics", February 1999
- ITU-T Recommendation I.761, "Inverse multiplexing for ATM (IMA)\(\), March 2000
- ITU-T Recommendation I.762, "ATM over fractional physical links", March 2000
- ETSI TS 101 135 v1.5.3, "High bit-rate Digital Subscriber Line (HDSL) transmission systems on metallic local lines: HDSL core specification and applications for combined ISDN-BA and 2 048 kbit/s transmission", September 2000
- ETSI TS 101 524 v1.1.3 , " Symmetrical single pair high bitrate Digital Subscriber Line (SDSL)" , November 2001
- ETSI TS 101 388 v1.3.1, " Asymmetric Digital Subscriber Line (ADSL) - European specific requirements [ITU-T Recommendation G.992.1 modified]\(", May 2002
- ETSI TS 101 270-1 v1.2.1, " Very high speed Digital Subscriber Line (VDSL); Part 1: Functional requirements", October 1999
- ETSI TS 101 270-2 v1.1.1, " Very high speed Digital Subscriber Line (VDSL); Part 2: Transceiver specification", February 2001
3.2 ATM Layer

The ATM layer is defined by a combination of ITU-T and ATM Forum specifications.

The cell formats and ATM layer generic services are defined in

At the UNI 4.1, support of the UNI cell format as defined in clause 2/I.361 is mandatory. Support of the NNI cell format as defined in clause 2/I.361 is optional.

For the UNI cell format, the GFC field shall be set to all zeros upon transmission, i.e. only the "uncontrolled" GFC mode of operation shall be used at the UNI 4.1.

3.2.1 Virtual Path/Virtual Channel (VPI/VCI) Identifier

The actual number of routing bits in the VPI and VCI subfields used for routing is negotiated between the user and the network, e.g. on a subscription basis. This number is determined on the basis of the lower requirement of the user or the network.

Note: The number of VCI routing bits used in a user-to-user VP is negotiated between the users of the VP.

The bits within the VPI and VCI fields used for routing are allocated using the following rules:

- The allocated bits of the VPI subfield shall be contiguous;
- The allocated bits of the VPI subfield shall be the least significant bits of the VPI subfield, beginning at bit 5 of octet 2;
- The allocated bits of the VCI subfield shall be contiguous;
- The allocated bits of the VCI subfield shall be the least significant bits of the VCI subfield, beginning at bit 5 of octet 4;

Any bits of the VPI subfield that are not allocated shall be set to 0. For a given VP, any bits of the VCI subfield that are not allocated shall be set to 0.

3.2.2 OAM Cell Flows

The OAM cell flows supported at the UNI 4.1 are defined in ITU-T Recommendation I.610:\n
- ITU-T Recommendation I.610, “B-ISDN operation and maintenance principles and functions”, February 1999, including the changes and corrections specified in:
  - ITU-T Recommendation I.610 Amend.1, “Amendment 1 (03/00) to Recommendation I.610 - B-ISDN operation and maintenance principles and functions”, March 2000

---

2 The ATM Forum does not have an update specification covering OAM flows. The ITU-T recommendation defines capabilities beyond those defined in UNI 3.1.
The following table is derived from Table 3/I.610. It lists the OAM functions of the ATM layer as identified in Section 9.2 of I.610. The OAM functions are listed as applicable to a terminal equipment and a network node (switching system) and are categorized as mandatory (M) or optional (O) at the UNI 4.1.

<table>
<thead>
<tr>
<th>OAM Function</th>
<th>Main Application</th>
<th>Terminal Equipment</th>
<th>Switching System</th>
</tr>
</thead>
<tbody>
<tr>
<td>Alarm Indication Signal</td>
<td>For reporting defect indications in the forward direction</td>
<td>M</td>
<td>M</td>
</tr>
<tr>
<td>Remote Defect Indication</td>
<td>For reporting defect indication in the backward direction</td>
<td>M</td>
<td>M</td>
</tr>
<tr>
<td>Continuity Check</td>
<td>For continuously monitoring continuity</td>
<td>O</td>
<td>O</td>
</tr>
<tr>
<td>LoopBack</td>
<td>For on demand connectivity monitoring</td>
<td>M(1)</td>
<td>M(1)</td>
</tr>
<tr>
<td></td>
<td>For fault localization</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>For pre-service connectivity verification</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Forward Performance Monitoring</td>
<td>For estimating performance in the forward direction</td>
<td>O</td>
<td>O</td>
</tr>
<tr>
<td>Backward reporting</td>
<td>For reporting performance estimations in the backward direction</td>
<td>O(2)</td>
<td>O(2)</td>
</tr>
<tr>
<td>Activation / Deactivation</td>
<td>For activating / deactivating Forward Performance Monitoring and Continuity Check.</td>
<td>O(3)</td>
<td>O(3)</td>
</tr>
</tbody>
</table>

Note 1 - Both end to end and segment LoopBack cells must be supported.
Note 2 - Mandatory if Forward Performance Monitoring is supported.
Note 3 - Mandatory if either Continuity Check or Forward Performance Monitoring are supported.

In addition to the OAM cell formats defined in I.610, the formats defined in the following specifications shall be allowed at the UNI 4.1:

In addition, the following ITU-T Recommendations may apply at the UNI 4.1:
- ITU-T Recommendation I.630, “ATM Protection Switching”, February 1999, including the changes and corrections specified in:
  - ITU-T Recommendation I.630 Corrigendum 1, March 2000
  - ITU-T Recommendation I.630 Amendment 1, March 2000

Finally, the following ITU-T Recommendation may apply at the user side of a UNI 4.1:
3.2.3 Traffic Management

Traffic Management is integral to the ATM Forum UNI 4.1 specification at the ATM layer. The specifications below shall apply at the UNI 4.1:

In addition, the following specifications may apply:

3.3 Management Plane: Integrated Local Management Interface

The following ATM Forum specification shall apply at the UNI 4.1:

In addition, the following specifications may apply:

- af-nm-0122.000, “Autoconfiguration of PVCs”, May 1999
- af-nm-0165.000, “Addendum to Autoconfiguration of PVCs”, February 2001

3.4 Control Plane: UNI Signalling

The following ATM Forum specification applies at the UNI 4.1:

*Note:* af-sig-0061.002 is itself an umbrella specification. For a detailed list of the UNI Signalling capabilities that it encompasses, See Table 1-2 of that document.

In addition, the following specification may apply:

- af-cs-0182.000, “Call Processing Priority Version 1.0”, April 2002

3.5 Security

The following ATM Forum specifications may apply at the UNI 4.1:

4 Appendices

Appendix A Guidelines for Use of ATM Addresses (Informative)

The following specifications on ATM Forum addressing may be used as guides:
