

Broadband Forum to host Interoperability Pavilion at Broadband World Forum

Staging first ever multi-vendor Vectoring Interoperability Demonstration

5 September 2013 - The [Broadband Forum](#) is hosting the 2013 Interoperability Pavilion at the Broadband World Forum, in Amsterdam, held October 22-24, 2013. This pavilion will be a showcase of some of the latest tools and techniques in G-PON, VDSL2 Vectoring and TR-069 related interoperability and certification, and will highlight companies who are making strides in superfast broadband interoperability and Connected Home management. The Broadband Forum welcomes an amazing group of member companies as Pavilion participants this year;

ADTRAN Alcatel-Lucent AVM D-Link Huawei Technologies

Ikanos Juniper Networks LAN Laboratories Technicolor

Telebyte University of New Hampshire- InterOperability Laboratory (UNH-IOL)

ZyXEL

“It is an honor to host this Interoperability Pavilion,” said Robin Mersh, CEO of the Broadband Forum. “With close to twenty years dedicated to building global broadband interoperability and to expediting deployment and industry innovation, this is a perfect opportunity to showcase the Broadband Forum’s latest specifications, our members’ certification and interoperability success, and to highlight the next stages of innovation being developed at the Forum. We look forward to sharing an exciting and informative Pavilion with all attendees.”

For the first time ever, the UNH-IOL will be organizing a live VDSL2 Vectoring multi-vendor interoperability demonstration in the Pavilion. Through many Broadband Forum private test events, the technology has matured, and we look forward to showing interoperability for this superfast broadband deployment option. Guided tours will be provided throughout the show, highlighting the key technologies being showcased and participating companies will provide presentations on areas they see as the next wave of development.

About the Broadband Forum

Broadband Forum, a non-profit industry organization, is focused on engineering smarter and faster broadband networks. Our work defines best practices for global networks, enables service and content delivery, establishes technology migration strategies, engineers critical device & service management tools, and is key to redefining broadband. Our free technical reports and white papers can be found at www.broadband-forum.org.
